

# WASP CAMERA PIGGING

SEE THE DETAIL OTHERS MISS.

The WASP RVIX 4K Camera Pig is a compact, free-floating inline inspection tool designed to bring visual clarity to pipeline operations. Deployable untethered and propelled using plant air or water, it can be pumped through pipework quickly and simply — without specialist launch equipment or tethering infrastructure.

Whether you need to verify the findings of an intelligent pigging run, assess the extent of internal fouling and scaling, or identify defects such as corrosion, weld anomalies or mechanical damage, the RVIX 4K delivers high-quality visual evidence directly from inside the line. Lightweight, versatile and compatible with a wide range of pipe sizes and configurations, it offers a fast and cost-effective solution for in-service inspection across oil & gas, petrochemical, water and process industries.

**RAPID DEPLOYMENT,  
NO SPECIALIST EQUIPMENT**

Propelled by plant air or water, the RVIX 4K requires no specialist launch equipment, tethering infrastructure or external power. It can be running within hours of arrival on site.

**4K ULTRA HIGH-RESOLUTION  
VIDEO WITH AI ENHANCEMENT**

Captures 4K video with programmable ultra-bright LED illumination and built-in AI video enhancement for sharper defect identification. Instant playback on pig retrieval for rapid on-site reporting.

**360° VIRTUAL REALITY  
CAPABILITY**

Also available with 360° VR capability, allowing operators to step virtually inside the pipeline for an unparalleled immersive view of its internal condition.

WHAT CAN IT SEE?

- Internal fouling / coke
  - Foreign objects / obstructions
  - General corrosion & metal loss
  - Pitting & erosion damage
  - Gouging & dents
- Hotspots
  - Pig grooves / tracking
  - Repairs & patchwork
  - Features — tees, valves, bends
  - Flanges & weld penetration
- Scale & deposits
  - Pinhole defects
  - Internal bend defects
  - Weld anomalies
  - Creep damage / swelling

KEY BENEFITS

- 

**Cost effective**

A fraction of conventional ILI mobilisation cost — no specialist equipment, no bespoke manufacturing.
- 

**Irrefutable evidence**

High-resolution optical video provides absolute visual confirmation of findings — no analyst interpretation required.
- 

**Standard launchers**

Uses existing standard launchers and receivers — no modifications or specialist handling equipment needed.
- 

**Instant reporting**

Immediate playback on pig retrieval. AI video enhancement enables rapid on-site defect identification and written visual inspection reports delivered post-run.

Ultra High-Definition Video. Absolute certainty. Reportable within minutes.

RVIX 4K — TECHNICAL SPECIFICATION

|               |                                                        |
|---------------|--------------------------------------------------------|
| Camera        | SONY IMX170QT 1/2.3" CMOS                              |
| Resolution    | 4K · 2.7K · 1080P · 720P                               |
| Frame Rate    | 30fps@4K / 240fps@720p                                 |
| Illumination  | Programmable Ultra-Bright LED Halo Array               |
| Diameter      | 2.5" – 16"                                             |
| Min. Bend     | 1D / Short-Radius                                      |
| Run Time      | 1.5 – 12 hours                                         |
| Pressure      | 450 PSI                                                |
| Storage       | Micro SD (512GB / 24hrs)                               |
| Medium        | Water or Gas/Air                                       |
| Field of View | 120 to 202 deg                                         |
| Construction  | Aluminium 6061-T6                                      |
| Stabilisation | Digital video stabilisation                            |
| Playback      | VR headset / Phone / Tablet / PC                       |
| Processing    | AI video enhancement                                   |
| Reports       | Written visual inspection reports & edited video files |

WHERE CAMERA PIGGING FITS

**USE ALONGSIDE INTELLIGENT PIGGING**

Camera pigging is a powerful complement to ultrasonic intelligent pigging. Where UltraSight provides precise dimensional data on every defect, the RVIX 4K provides direct visual confirmation — enabling operators to cross-reference findings, verify cleaning effectiveness, and build a complete picture of internal condition that neither technology can deliver alone.

**USE AS A STANDALONE SERVICE**

Where full intelligent pigging is not required or not yet justified, camera pigging offers a rapid, cost-effective alternative. Ideal for pre-inspection screening, post-cleaning verification, condition monitoring of known problem areas, and any situation where fast visual evidence is needed without the lead time or cost of a full ILI deployment.

CAMERA PIGGING vs CONVENTIONAL ILI

| CRITERIA              | CONVENTIONAL ILI                          | RVIX 4K CAMERA PIG                         |
|-----------------------|-------------------------------------------|--------------------------------------------|
| Cost                  | Moderate to High                          | Low                                        |
| Data type             | Dimensional / ultrasonic                  | High-definition optical video              |
| Defect quantification | Precise dimensional measurement           | Visual confirmation and characterisation   |
| Fouling assessment    | Requires analysis & C-scan interpretation | Direct visual with extent and location     |
| Reporting             | Detailed engineering report               | Written visual report & full video footage |
| Best use              | Full integrity assessment                 | Screening, verification, monitoring        |

EXPERIENCE YOU CAN TRUST

WASP's camera pigging service is operated by experienced inspection engineers who understand pipelines — not just cameras.

Every run is planned and executed with the same rigour we apply to our intelligent pigging operations — with full consideration of pig sizing, flow rates, pressure ratings and retrieval logistics.

Our written visual inspection reports provide clear, actionable findings, identifying and locating every significant feature observed, cross-referenced to intelligent pigging data where available.

With over 75 years of combined experience across 40+ countries, you can trust WASP to give you the complete picture your assets demand.
